Brainstorm & Idea Prioritization Template

Date	08 October 2026
Team ID	_____
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Volume is preferred over value, out-of-the-box ideas are welcome and built upon, and all participants collaborate to develop a rich set of creative solutions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Team: Kalaivanan Panneerselvam (Team Lead). Skill required: ServiceNow.

Selected problem statement:

How can spreadsheet (Excel) data be imported into ServiceNow quickly and accurately, with field mapping, validation and no duplicate records?

Step-2: Brainstorm, Idea Listing and Grouping

Group	Ideas listed
Spreadsheet & Tables	Prepare the spreadsheet with clean headers Create a custom target table with required fields Use suitable field types (string, date, choice, reference)
Import Set & Transform Map	Load the Excel file as a data source into an import set table Create a transform map from the import set table to the target table Map each spreadsheet column to a target field using field maps
Transform, Validate & Coalesce	Run the transform and review import set rows and transform history Enable coalesce on a unique field to avoid duplicates Insert new data in Excel format and re-import to test update vs insert
Reports & Dashboards	Create a report on the imported records Add the report to a dashboard for easy viewing

Step-3: Idea Prioritization

Idea	Importance (impact)	Feasibility (effort)	Priority
Create spreadsheet and custom table	High	High	1 - Do first
Create import set table and transform map	High	Medium	2 - Do first
Transform data and validate	High	Medium	3 - Do next
Enable coalesce to avoid duplicate records	High	High	3 - Do next
Insert new data in Excel format and re-import	Medium	High	4 - Do next
Create report and add it to a dashboard	Medium	Medium	5 - Do later

Outcome: The team will build the solution in the order above: data preparation first, then import set and transform map, then validation and coalesce, and finally reporting.
