Ideation Phase

Empathize & Discover

Date	08 October 2026
Team ID	_____
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It helps the team understand the true problem and the person who experiences it, from the user's own perspective, goals and challenges.

Target user: **ServiceNow Administrator / Data Analyst** who receives business data in Excel spreadsheets and must load it into ServiceNow tables.

Empathy Map: Importing Spreadsheet Data using Transform Maps

SAYS • "I have 500 rows in Excel, I do not want to type them one by one." • "Why are duplicate records getting created?" • "Is my data mapped to the right fields?"	**THINKS** • Manual entry will take hours and cause typing mistakes. • A transform map should do this automatically. • If the mapping is wrong, bad data will go into production.
DOES • Prepares the Excel file with clean column headers. • Creates the custom table and loads the file into an import set. • Builds the transform map, runs the transform and checks the results.	**FEELS** • Worried about duplicate or missing records. • Frustrated by repeated manual clean-up. • Confident and relieved when data loads correctly.
PAINS • Duplicate records on every re-import. • Field names in Excel do not match table fields. • No easy way to validate data before it reaches the target table.	**GAINS** • Bulk data loaded in minutes. • Coalesce updates existing records and inserts only new ones. • Reports and dashboards show clean, trusted data.

The map shows that the user's main need is a reliable, repeatable way to move spreadsheet data into ServiceNow without duplicates. Transform Maps with coalesce directly address the pains and deliver the gains listed above.
