| **Date** | 08 October 2026 |
| **Team ID** | _____ |
| **Project Name** | Import Data using Transform Maps (Spreadsheet) |
| **Maximum Marks** | 4 Marks |

## Solution Architecture:

Solution architecture bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best technology solution to solve the existing business problem.
- Describe the structure, characteristics and behaviour of the solution to project stakeholders.
- Define features, development phases and solution requirements.
- Provide specifications according to which the solution is defined, managed and delivered.

## Solution Architecture Diagram

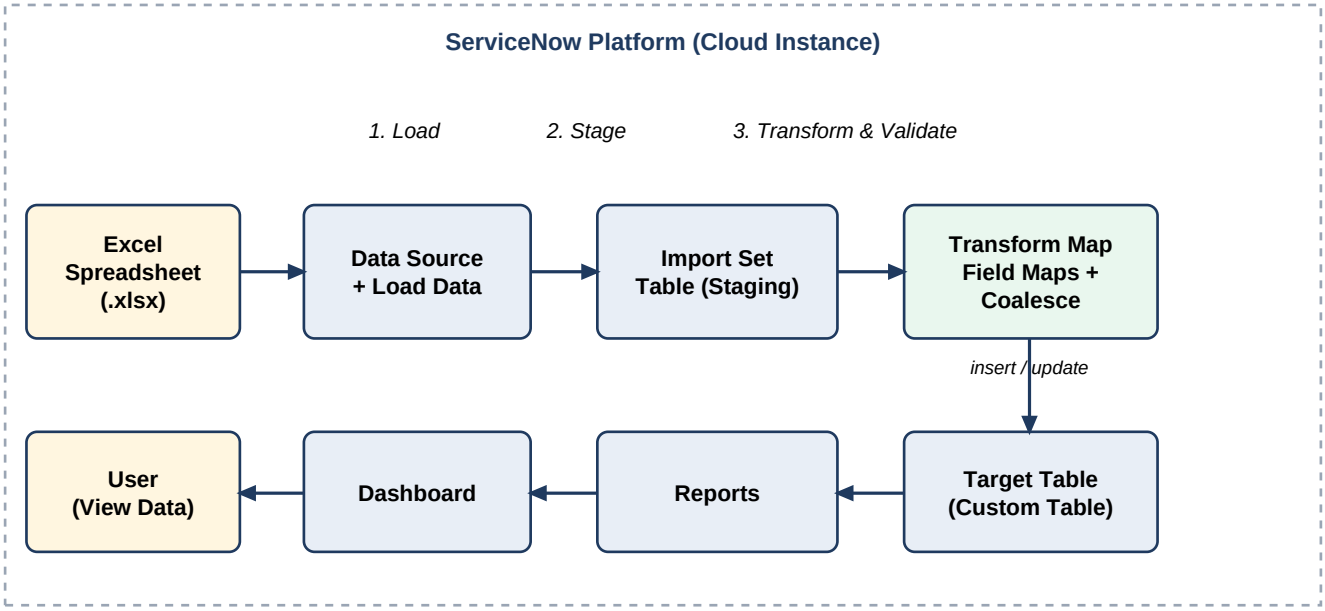

Figure 1: Architecture and data flow of importing spreadsheet data using a Transform Map

### Component description

| Layer | Description |
|---|---|
| **Source** | Excel spreadsheet with column headers and rows of data prepared by the user. |
| **Data Source / Load Data** | The spreadsheet is attached to a Data Source record and loaded; ServiceNow creates the Import Set table (staging table). |
| **Import Set Table** | Temporary staging table that holds every row exactly as it appears in the spreadsheet. |
| **Transform Map** | Maps source columns to target fields, applies validation and uses coalesce to decide whether to update an existing record or insert a new one. |
| **Target Table** | Custom table that stores the final, clean records. |
| **Reports & Dashboard** | Reports built on the target table and shown together on a dashboard. |
