Solution Requirements (Functional & Non-functional)

Date	08 October 2026
Team ID	_____
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Creation of Spreadsheet and Table	Create the spreadsheet (Excel) with column headers and sample data Create the custom target table with required fields
FR-2	Creation of Import Set Table and Transform Map	Create the import set table by loading the spreadsheet as a data source Create the transform map with source-to-target field maps
FR-3	Transform Data & Validate, and Enable Coalesce	Run the transform and validate the imported records Enable coalesce on a unique field to avoid duplicate records Insert new data in Excel format and re-import
FR-4	Creation of Reports & Dashboards	Create a report on the target table Add the report to a dashboard

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The import is done through simple, standard ServiceNow modules and a plain Excel file; users need no coding knowledge.
NFR-2	Security	Only users with import and admin roles can load data and run transform maps; access to the target table is controlled by ACLs.
NFR-3	Reliability	Coalesce prevents duplicates; import set rows and transform history give a record of every success and error.
NFR-4	Performance	Bulk rows are loaded and transformed in one run within a few minutes, instead of hours of manual entry.
NFR-5	Availability	Runs on the ServiceNow cloud instance, available whenever the instance is available.
NFR-6	Scalability	The same transform map can be reused for larger files and new data without redesign.
