Project Design Phase

Problem - Solution Fit Template

Date	08 October 2026
Team ID	_____
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Problem - Solution Fit Template:

The Problem-Solution Fit means that a real problem has been found with the customer and that the solution actually solves that problem. It helps identify behavioural patterns and recognise what would work and why.

Purpose:

- Solve the data-import problem in a way that fits how administrators and analysts already work with spreadsheets.
- Increase adoption by using standard ServiceNow features (Import Sets and Transform Maps) instead of custom tools.
- Understand the existing situation, manual and error-prone imports, in order to improve it.

Template:

Canvas section	Description
1. Customer Segment(s)	ServiceNow administrators, developers and data analysts who receive data in Excel files.
2. Jobs-to-be-done / Problems	Load spreadsheet data into ServiceNow tables; keep data free of duplicates; present data in reports and dashboards.
3. Triggers	A large Excel file arrives; existing data must be updated; management asks for a report.
4. Emotions: Before / After	Before: frustrated, worried about errors. After: confident, saves time, trusts the data.
5. Available Solutions	Manual record entry; copy-paste into list view; custom scripts. These are slow, error-prone or hard to maintain.
6. Customer Constraints	Limited time, data quality issues in source files, need for ServiceNow admin / import roles.
7. Behaviour	Customers already keep and share data in Excel and are comfortable with spreadsheets.
8. Channels of Behaviour (Online)	ServiceNow instance: System Import Sets, Transform Maps, Reports and Dashboards.
9. Channels of Behaviour (Offline)	Preparing and cleaning the Excel file; sharing the file by email or shared drive.
10. Your Solution	Import Excel data using an Import Set table and a Transform Map with field mapping, validation and coalesce, then visualise it with reports and a dashboard.
11. Root Cause of Problem	No automated link between spreadsheet columns and table fields, and no rule to identify existing records.
